

Blueprint 001 - Faraday Coil Pyramid

This blueprint documents the sovereign vision and construction layout for the 'Faraday Coil Pyramid' as conceived by Richard of the House Strmiska.

Purpose:

To construct a 36-inch by 12-inch rectangular Faraday cage pyramid using aluminum framing and copper wire wrapped as primary and secondary coils to regulate electromagnetic current. This setup functions as a sovereign Tesla-based energy transformer and a protected universal energy chamber.

Design Specifications:

- Base Structure: Aluminum frame, rectangular geometry (36 in. length x 12 in. width, 12 in. height)**
- Shielding: Full Faraday cage effect via aluminum mesh or plates**
- Primary Coil: Thick copper wire wrapped directly on aluminum base (low-voltage excitation)**
- Secondary Coil: Longer, thinner copper wire in resonant configuration for high-voltage output**
- Central Node: Rotor-driven inertia shaft (from SCREAM SOVEREIGNTY motor unit)**
- Use Case: Free energy experimentation, field containment, coil resonance, grid isolation**
